DOWNLOAD CAMPBELL, CA - JUNE 7, 2016 - Forescout Technologies Inc., a pioneer in agency and Internet of Things (IoT) cybersecurity, announced today that she has been named as a vendor in the Gartner Market Guide to Network Access Control (NAC). The report provides an in-depth understanding and technical analysis of the state of the NAC market. The wider corporate adoption of IoT and the introduction of its own device (BYOD) is the driving force behind the need for NAC. Employees regularly connect to networks remotely, and consultants, contractors and other guests visit the facilities and request a connection to the company's network. Many businesses have created BYOD networks, primarily wireless, so that employees can access networks with personal devices. In addition, there is a growing number of IoT devices that need to be managed with NAC, said Gartner analysts Claudio Neiva and Lawrence Orance. Through ControlFabric Forescout® architecture and integrated security platform, Forescout's CounterACT® has a unique ability to dynamically identify, evaluate, and protect endpoints and Internet-connected devices, including both authorized and unauthorized, the moment they connect to the network. Forescout's CounterACT reduces enterprise vulnerability and improves security through its ability to share contextual data in real time through full network visibility and automated system threat response. We believe that being named as a representative of NAC Gartner suppliers is a true testament to the prospects of our technology and validation of our leadership in the network access management space, said Forescout CEO and President Michael DeCesare. IoT explodes. The likelihood of an IoT-based security breach increases by the minute. Businesses need full visibility and control over all devices on their network so as not to be the victim of an attack. While the information security market is expected to grow by 14.9% in 2015, the market for network access control is estimated to have grown by 18% from 2014 to 2015, with an estimated market value of \$543 million, Gartner analysts Claudio Neiva and Orans continued. Gartner: Market Guide to Network Access Management, March 7, 2016 Gartner does not support any vendor, product or service featured in its research publications, nor does it advise technology users to select only those vendors with the highest ratings or other designations. Gartner's research publications are made up of opinions from the Gartner research organization and should not be construed as fact statements. Gartner waives all guarantees expressed or implied in relation to this study, including any guarantees of trade or suitability for a specific purpose. About Forescout Forescout Technologies, Inc. converts security through visibility. Forescout offers Global 2000 businesses and government organizations a unique opportunity to see devices, including devices as soon as they connect to the network. Equally important, Forescout allows you to manage these devices and organize information sharing and work between disparate security tools to speed up incident response. Unlike traditional security alternatives, Forescout achieves this without requiring software agents or previous device knowledge. The company's solutions integrate with leading network, security, mobility, and IT management products to overcome security silos, automate workflows, and make significant cost savings. To date, more than 2,000 customers in more than 60 countries are improving their network security and compliance with Forescout solutions. Forescout Media Relations Contact Andria Barrera Senior Public Relations Manager 408-538-0870 (email protected) Last update August 9, 2019 Today's businesses require secure 24/7 access to their cloud applications and data, and require more than a Web Single Sign-On to move their business forward. The world has changed, allowing an almost infinite amount of identity and accounts on a variety of platforms and devices, including cloud, mobile, social and personal networks. Having an access identification and management strategy is more important than ever. 2018 (Second year) CA becomes visionaries from leaders. Micro Focus gets into Visionaries from contenders. Five leaders in 2018: Microsoft OKTA IBM Oracle Ping Identity 2017 (First Year) Gartner recently named the following vendors a leader in its first Magic access management quadrant, Worldwide 2017. Microsoft Okta CA Oracle Technology IBM Ping Identity - and used to publish the IDaaS report, but can't find it anymore after 2016. I listed IDaaS MH in 2016 and 2015 here as they are similar and worth comparing them. 2016 In 2016 MH for IDaaS (Identification and Access Management as a Service), the following three vendors are in the lead: 2015, the leaders of the Gartner quadrant graphics featured only one vendor - OKTA. Gartner launched a guide to network access management in 2016. In years past, an industry analyst has decided to release an annual magic quadrant displaying leaders, visionaries and more in one neat display. Due to the relative stability of the NAC industry and the dwindling number of market participants, Gartner has decided to format its annual analysis as a market guide. With this guide, Gartner market analysis, industry forecasts, and look at some of the biggest names in the NAC today. You can download a copy now from Pulse Secure. So what is network access control? Network? Access Control (NAC) solutions allow organizations to implement device management policies and access users to corporate networks. Some of these policies include device authentication and endpoint configuration and device authentication. In today's landscape, the NAC market must adapt to meet the broad needs of a diverse customer base. With the increase in companies that allow BYOD (Bring Your Own Device), the growth of the Internet of Things, as well as guests and contractors who request access to the company's network, NAC becomes a necessity for most organizations. Over the past decade, the market has matured from a scattered collection of vendors to the market, driven by a number of network access requirements. NAC solutions typically require these minimum characteristics: policy management, baseline, access control, guest networking, proofing and visibility, and bi-directional integration. NAC decisions tend to fall into two different categories; infrastructure suppliers and clean game suppliers. Gartner provides detailed information about the benefits and unique features associated with each relevant category. Where is the market headed? Gartner's NAC guide gives a deep insight into the latest market trends, as well as predictions about the future of the industry. It is a market that seems to be in motion, adapting to the latest developments in corporate technology. With Internet of Things and BYOD programs becoming more popular in the workplace, consumers are looking for a NAC solution that fits their broader needs. According to the report, the NAC market is expected to grow by 18% last year, reaching the market size of about \$543 million. Big Names in the NAC Market Aruba - AEWlett Packard solution, Aruba ClearPass Policy Manager offers a radius solution available for both hardware and virtual devices. This solution offers guest access management, on-board equipment and endpoint posture assessments in different operating systems. Pulse Secure - Pulse Secure was created as a result of the acquisition of the Junos Pulse product line by Siris Capital in 2014. In addition to the NAC solution, Pulse Secure also offers a virtual private network solution and a mobility security solution. The NAC solution is based on the RADIUS platform and is available through both hardware and a virtual device. Cisco - Cisco Identity Services Engine sever policy is based on RADIUS, allowing Cisco to maintain authentication in a variety of network infrastructure environments. Cisco NAC solution is available as a hardware and as a virtual server. Extreme Networks - Extreme Networks is a San Jose company providing SOLUTIONS to NAC after the acquisition of Enterasys Networks. In addition to NAC solutions, Extreme Networks also provides security products in the next-generation IPS and firewall, as well as in SIEM zones. Extreme Networks is based on RADIUS and is available as hardware or as a virtual device. Device. Auconet is a German-based company based in San Francisco. Since 2005, Auconet has been delivering NAC solutions that combine NAC security and network troubleshooting capabilities in one product. Auconet provides multi-rental opportunities for MSPs offering managed NAC services. Final Word Gartner recommends that businesses invest in NAC solutions if they want to improve network visibility, improve control over networking sites, or strengthen control and support for the BYOD or Internet of Things network. This market guide provides IT professionals with the insight and analytics they need to make an informed decision about which NAC solution best suits their needs. Remember that virtually any company can benefit from a Network Access Control solution, but you should also be aware of the value of the product to your company relative to its value. Easy, side-by-side comparison of the top 802.11ac wireless vendors Description of each solution and their strengths Important questions to ask themselves and potential vendors when considering a Market Review solution to the current 802.11ac wireless space Download Now Tagged Tagged
